

Neigh-Lox®

Supports normal digestive function in all horses

Gastric ulceration is a widespread clinical finding among foals and performance horses. Prevalence of gastric ulcer damage has been documented in 93% of horses in race training and in nearly 60% of other performance horses. Even backyard horses have been shown to be at risk. For this reason, there has been much discussion recently in the equine industry about methods to support and maintain normal digestive function in horses.

Why Neigh-Lox?

- Palatable, easy-to-feed pellet
- Reasonably priced
- Maintains normal stomach environment

What causes gastric ulcers?

Gastric ulcers are caused by excessive acid accumulation in the stomach. The acid irritates the stomach lining and causes discomfort. This problem is common in stabled horses on high-grain and low-forage diets such as pleasure horses, horses in training and horses being prepared for sales. Increased levels of stress may also be a factor in the development of ulcers.

What is Neigh-Lox and how does it work?

Neigh-Lox contains coating agents that quickly neutralize excess gastric secretions and protects the nonglandular portion of the stomach. Neigh-Lox promotes a normal gastric environment.

How can Neigh-Lox help horses in training?

Neigh-Lox reduces the stomach discomfort often experienced by stressed horses. When a horse feels well,

Neigh-Lox can be used as a nutritional supplement for all classes of horses. Feeding recommendations for Neigh-Lox are as follows:

- **Weanlings** (6-12 months of age): add 2 oz. (1 scoop) to each grain meal. Do not exceed a total daily intake of 8 oz.
- **Yearlings** (12-24 months of age): add 4 oz. (2 scoops) to each grain meal. Do not exceed a total daily intake of 16 oz.
- **Horses in Training:** add 4 oz. (2 scoops) to each grain meal. Do not exceed a total daily intake of 16 oz.
