

Horse owner supports Brooks/KPP supplements

When Kathy Kajaks discovered her 20 year old gelding Sterling was lame after a trim she feared that he had developed an abscess. As it turned out the gelding did have an abscess that worked its way out through the coronet band leaving a large gash in the hoof wall. Kathy had recently started using **Ker A Form** on the advice of Brooks representative Greg Watson and continued as the affected hoof grew out.

“I had used **Joint Armor** on Sterling before and had been very pleased with the results so I had confidence in the Brooks/KPP products,” Kathy explained. Once the abscess had worked its way out through the coronet band the large gash at the top of the hoof wall under the coronet band gradually worked its way down the hoof wall and was finally patched. “The Ker A Form made a huge difference in Sterling’s hooves “ Kathy pointed out.

The photos illustrate the progress from 10 weeks after the abscess had burst to 36 weeks when the hoof was patched. **KPP and Brooks Feeds thank Kathy Kajaks for sharing this information with us.**

10 weeks

13 weeks

Hoof patched and shod at 36 weeks

27 weeks

30 weeks

*“I was extremely pleased with how the hoof grew out. He now has good strong hooves.
I would recommend Ker A Form to anyone concerned about hoof health”.*
